2025-26

Dr. Punam Suri

(Padma Shri Awardee)

President, DAVCMC, New Delhi

Dear Readers

As I reflect on the recent achievements of our DAV family, I am filled with pride and gratitude. Our meeting with Hon'ble Prime Minister Shri Narendra Modi ji on September 6th was a moment of great honor, during which I conveyed Teacher's Day wishes on behalf of the DAV fraternity. The Prime Minister deeply appreciated DAV's remarkable contribution to education and urged us to actively promote the Swadeshi movement and the "Made in India" initiative.

This year has been truly extraordinary for DAV. A DAV student became the World Champion at the World Skating Championship, while Hansraj College, Delhi University, a DAV institution, secured the third position among India's top colleges. Our illustrious alumnus Shah Rukh Khan received his first National Film Award, adding yet another feather to DAV's cap. At the World Para Athletics Championships 2025, Nishad Kumar, India's para high-jump sensation and proud DAV alumnus, set a new Asian record by clearing 2.14 meters, clearing gold, while Sandeep Chaudhary, alumnus of DAV Hansraj College, won the silver medal in Men's Javelin Throw F44.

On a personal note, I recently watched the brilliant film by Shri Anupam Kher, another shining DAVian, whose dedication to excellence continues to inspire millions.

These milestones reflect the strength, spirit, and unity of our students, teachers, parents, and alumni. With the Prime Minister's encouragement and our collective resolve, DAV will continue to illuminate the path of education and nation-building.

Jai DAV!

Dr. Punam Suri (Padma Shri Awardee)

Editor's Note

Dear Readers,

Welcome to this edition of our school magazine!

This magazine is a celebration of creativity, curiosity, and the vibrant spirit of our school. Inside, you'll find thought-provoking articles, inspiring poems, brain-teasing puzzles, dazzling artwork, and stories that reflect the voices of our students.

Every page is a window into ideas, imagination, and learning. Our goal is to inform and inspire you while showcasing the incredible talent in our school community.

A big thanks to our editorial team and contributors for their hard work in bringing this edition to life. We hope you enjoy reading it as much as we enjoyed creating it!

Happy Reading!

— The Editorial Team

Wisdom Across Years

Akhil Kumawat, alumnus of DAV Centenary Public School, Jaipur who is currently working as an Assistant Executive Engineer in CPWD (Central Public Works Department) under Ministry of Housing & Urban Affairs, passed his XII class in 2016 with 88.40%

Pursued B.Tech in Electrical Engineering from MNIT Jaipur - 2017-2021, Secured AIR 62 in GATE 2022 exam in Electrical Engineering and got selected in Indian Oil Corporation Limited (IOCL) and joined in December 2022, Secured AIR 1 in UPSC ESE 2022 (Engineering Services Examination) in Electrical Engineering.

He felt so honoured and elated when he was invited by honourable President of India on 26th January, 2023 to Rashtrapati Bhawan for High tea and states that “The journey to secure the top position in one of the most coveted exams in our nation originates from DAV Jaipur. Discipline and concentration are the pillars upon which rests the weight of success. I am proud to inculcate these values from my Weekly Hawan sessions at DAV Jaipur which pushed me to stay focused with unfaltering consistency. The deep-rooted values of believing in my Karma have played a pivotal role in building a strong character. The moral education and Vedic lessons imparted in me at DAV Jaipur have played a defining role in developing my belief system”.

Inspired by his parents, teachers and family members he further adds that, “The support and guidance of teachers at DAV Jaipur has been no less than a launching pad for my landmark achievement in a prestigious exam like UPSC Engineering Services Examination. I express my sincerest gratitude to the whole school for being invaluable in this success. Stories like mine are truly a testimony of values and education imparted by this school”.

Akhil Kumawat

The Clock That Never Stops

As a Grade 12 student, the ticking of the clock has never felt louder. Every second seems to carry the weight of expectations, deadlines, and dreams. There was a time when days passed slowly and time felt endless, but now it seems to slip away before I can even realize it. Syllabi to complete, exams to prepare for, and decisions about the future—everything moves alongside the steady rhythm of time.

Watching days turn into weeks and weeks into months has made me realize that time, once lost, never returns. This awareness has gradually transformed my approach towards life. I have started valuing not just hours, but even minutes—trying to make them meaningful. Whether it is studying with focus, spending time with family, or simply reflecting on my goals, I now understand the importance of balance.

There are moments when the ticking feels overwhelming, reminding me of the pressure I carry. Yet, I have learned to see it differently—not as a source of stress, but as a quiet guide pushing me forward. It reminds me to stay disciplined, to avoid procrastination, and to keep moving ahead even on difficult days.

The clock never stops, and neither should our efforts. It does not wait for anyone, but it silently rewards those who respect its value. As I move closer to the next phase of my life, I carry this lesson with me—that time is one of the greatest teachers, and how we choose to use it defines who we become.

INNER PEACE AND IT'S IMPACT ON SOCIETY

Life is about living—being happy, celebrating, and finding ways to solve problems instead of creating them. Life is short on this planet, yet we fill it with anxiety and tension, forgetting the true meaning of peace.

Every day, the world witnesses violence—wars in Ukraine, Iraq, Afghanistan and Sudan, conflicts, and multiple cases of domestic violence—clear signs that peace needs attention and solutions, not ignorance. Peace on Earth can only come when people live peacefully within. Peace has two forms: External peace, the absence of war and conflict, and Internal peace, the calm within us that helps us deal with stress and fear. Both forms are deeply connected.

When people find inner peace, it naturally promotes peace in society. A peaceful mind builds a peaceful world. Peace allows societies to grow and flourish. It creates belonging, inclusivity, and the courage to move forward. Peace is not just believing in yourself—it is staying calm, focused, and aware of your role in society. Real peace does not separate us from the world; it connects us to it. It empowers us to bring change, to sow seeds of understanding, reconciliation, and compassion.

Inner peace is not just a personal achievement to admire—it is a vital contribution towards global peace. Peace is much more than the absence of war or conflict; it is an ongoing journey.

Even when challenges stand in the way, Peace creates space for progress, for human connection and innovation, making it a cause truly worth fighting for at every level of society. Its impact is deep, wide, and lasting.

So let us take Peace seriously, understand its true importance, and choose to live it—within ourselves and for the world.

Small Ideas, Great Achievements

“Small ideas can grow into great achievements.”

Every great success in the world begins with a simple idea. Just like a tiny seed slowly grows into a tall and strong tree, a small thought in a young mind can develop into something extraordinary. Many inventions, discoveries, and inspiring stories started with one small idea and the courage to believe in it.

History shows us that great thinkers once started as curious students who dared to imagine something new. With creativity, patience, and hard work, their small ideas turned into inventions that changed the world and improved people’s lives.

Students today hold the power of imagination and curiosity. A new thought, a creative drawing, an interesting story, or a unique solution to a problem can become the beginning of something great. When young minds explore ideas, ask questions, and keep learning, they open the door to endless possibilities.

The leaders, scientists, artists, and innovators of tomorrow are sitting in classrooms today. With determination, confidence, and dedication, every dream can slowly grow into reality.

The Supercomputer Inside You

“Your brain is your supercomputer.”

Hidden inside our heads is one of the most powerful and fascinating organs in the world—the human brain. It controls everything we do, from thinking and learning to breathing and moving.

The human brain contains about 86 billion neurons, which are tiny nerve cells that send messages throughout the body. These neurons communicate with each other at incredible speed, helping us think, remember, speak, and react. In fact, the brain is so powerful that it can generate enough electrical energy to power a small light bulb!

What makes the brain even more amazing is that it never truly rests. Even when we are sleeping, our brain stays busy. During sleep, it organizes memories, processes information we learned during the day, and prepares us for new learning. This is why getting enough sleep is so important for students.

Scientists also say that curiosity is one of the best ways to keep the brain healthy and active. When we read books, solve puzzles, learn new skills, or ask questions, our brain forms new connections that make it stronger and sharper.

Our brain is like a powerful supercomputer, but it becomes even more powerful when we use it every day for learning and creativity. So stay curious, explore new ideas, read often, and never stop asking questions—because every new thought makes your brain stronger and brighter!

She Understood Life

Life has long been compared to a path scattered with obstacles, passed down as a truth through generations. Yet, in time, people come to realise that it was never life itself that was unbearably difficult—it was the way they looked at it that made the journey heavy. I once knew a little girl, untouched by the weight of the world around her. She carried no anxiety about the future, no regrets of the past, not even restlessness about the present. She possessed a rare gift—the ability to find happiness in the simplest of moments. Every small step she took felt complete, already successful in its own quiet way.

Then came a sudden change of season. With it arrived towering dreams, unfamiliar fears, and the expectations of others. She grew, and in growing, she was no longer the little girl with a carefree smile. She became a young woman who learned to hide her pain behind a comforting one. Each step forward now echoed with unsettling questions—What will I become? Will I ever find love? Will I ever find peace?

Night after night, as the world bloomed silently outside her window, she lay awake, wondering if it was possible to reclaim the happy little girl she once was. Guilt crept in—for not feeling happy enough, for believing she had buried that child within herself to fit into a society that never truly tried to understand her. Perhaps, she thought, survival had demanded that sacrifice.

With time, she became someone who understood everyone's pain. She began to see light even in those deemed dark, as though she carried within her a quiet, almost divine empathy. Some might have called it a god-like understanding—perhaps, in her own way, it was.

Then, on a luminous full-moon night, standing at the fragile edge of her teenage years, she dreamt of a voice that whispered, "Que sera, sera," an old Italian saying meaning What will be, will be. The meaning settled into her heart in an instant. She realised that the voice did not belong to a stranger—it belonged to the little girl she had long believed was lost, the joyful version of herself she had mourned.

Another season changed.

She still cared, but not to the point of destruction. She still worried, but not in ways that tore her apart. She began to live in the present, discovering happiness in fleeting moments and unknowingly inspiring others through her quiet resilience. She had not changed—she had evolved. And in that evolution, she understood something profound: the little girl had never died. She had been there all along, walking beside her, watching, waiting.

Like the finest gold, she too had been passed through fire for refinement. And there was still more refining left, for she was never meant for small things. She was becoming someone destined to create something lasting, something meaningful. Until then, she chose to live fully in the moment, exactly as life intended.

At last, she understood life.

Through Doors, I Wander.

There's a collection of doors in the corner of my room.
And if you ask me where they lead to ,
I will tell you:
Everyone is a portal to a distinct fantasy Each with a
different fragrance,
A different season,
And different stories of ecstasy.
Some portray a tragic war,
Some with a soul that the may haunt us all.
Many have a lesson to teach,
That can change our perspective for the world we see.
Numerous allure with a happy ending,
And a few terminate with a melancholic love.
The ones at the top take us,
To an enchanted land.
Where magic is real,
And muggles are inferior
The ones on the right,
Are my childhood companion Where some dogs
run for their lives,
A big bad giant learns to be kind,
And a grandpa who never let's his grandkids sleep
without a bed time story.
Each of these doors is dear to me,
As they are my escape from this chaotic world.
And if you think this poem,
Has unfinished thoughts,
It is because , in one way or another,
Each door is to be explored more.

From Magnets to Motors

All the gears on course,
I get the parts at the source,
High speed motors so expensive,
Those circuits so comprehensive.

North to north and,
South to south,
Poles of magnets,
Will rebel.

Reduce, reuse, recycle, repeat!
Is the motto of my frog,
He drives a solar powered car,
To cut back on the smog.

Science is cool,
The evidence is clear,
Its so much fun,
Enjoy it my dear!

Imagination

When we were young
Our imagination was great,
But now it's a hollow place.

Remember the times magic was
alive and we were heroes or fairies.

We had no pressure or
responsibilities & had time to play,
but now, time has changed.

I miss those times with imaginary
friends & nursery rhymes, but now,
life's different.

People have changed,
responsibilities increased & no time
to nap or play.

Oh! I wish that I were young again,
to spend time with friends & have a
time great.

विनाश की आहट

चलो आज एक कविता सुनाती हूँ,
जगनुओं से तुम्हारा मिलन कराती हूँ।
कभी सोचा है कि वो जंगल जो शांत रहता है क्या हमेशा रहेगा ?
आखिर उन वृक्षों का अदृश्य लहू कब तक बहेगा ?

आज इन उपकरणों का उपयोग जो हम अत्यधिक कर रहे...
क्या ये सिलसिला हमेशा यूँ ही चलता रहेगा?
कभी पेड़ों को काटा गया, कभी प्राणियों का मांस बाँटा गया
यदि ऐसा ही होता रहा तो धरती का विनाश भी जल्द ही होगा !

और तब शिकायतों के सिवाय कुछ न बचेगा ! कुछ न बचेगा !

शिक्षा का महत्व

शिक्षा हमें सही राह दिखाती है,
अज्ञान की छाया दूर भगाती है।
किताबों में छुपा है ज्ञान अपार,
जो देता है जीवन को नया आकार।

पढ़ाई से आती समझ और विवेक,
सही-गलत का मिलता है हमें लेख।
मेहनत करना यही सिखाती है,
हर कठिनाई से आगे बढ़ाती है।

शिक्षा में गलती होना गलत नहीं होता,
गलतियों से ही तो सीखना संभव होता।
हर भूल हमें आगे बढ़ाती है,
नई राहों की पहचान कराती है।

गुरु के शब्दों में होता है उजाला,
उनसे ही मिलता है ज्ञान निराला।
उनके मार्गदर्शन से आगे बढ़ें,
अपने सपनों की ओर हम चलें

रेगिस्तान की रानी धरती

रेगिस्तान की रानी धरती,
सोने जैसी चमके माटी।
सूरज की किरणें जब छू जाएँ,
टीले भी लगें जैसे थाली।

ऊँट की घंटियाँ जब बजतीं,
मन में मधुर तान सी सजतीं।
नृत्य-गीत रंग भर जाएँ,
हर गली में खुशियाँ छा जाएँ।

किले-हवेलियाँ गाथा गाएँ,
वीरों की शौर्य कथा सुनाएँ।
मेहमान यहाँ बनते अपने,
दिल से सबको गले लगाएँ।

रंग-बिरंगे इस प्रदेश में,
हर त्योहार खिले विशेष में।
मरुधर की पहचान महान,
हम सबको है इस पर अभिमान।

थार की रेत, हवाओं की बात,
संस्कृति में छुपा है जज़्बात।
इतिहास की है अद्भुत थाती,
राजस्थानी आन सदा दिल में समाती।

अपने सपनों की ओर उड़ान

दुनिया की भीड़ में खो मत जाना,
नज़रों को अपने सपनों पर टिकाना।
जो दिखे चमकता, सब सच नहीं होता,
हर शोर मंज़िल तक नहीं ले जाता।

नज़रें उठाओ, उन ऊँचाइयों तक,
जहाँ सोच भी पहुँचना मुश्किल मानती है।
जो असंभव लगे सबके लिए,
वही राह तुम्हारे नाम लिखी जाती है।

डर को अपना दुश्मन मत मानो,
उसे अपनी ताकत बना लो आज
बस ध्यान रखो—राह मत छोड़ो,
क्योंकि सपना तुम्हें ही बुलाये

Discover, Learn, and Be Amazed!

Caption: “Mathematics is the poetry of logical ideas.

”Mathematics is not only about numbers and formulas—it is full of surprises!

Did you know that zero was invented in India? Without zero, modern mathematics and computers would not exist. The concept of zero was developed by the great mathematician Aryabhata.

Another amazing fact is about the number 1089. If you take any three-digit number where the first and last digits differ, reverse it, subtract the smaller number from the bigger one, and then add the reverse of the result—you will always get 1089!

Mathematics is also found in nature. The spiral patterns in shells, flowers, and hurricanes follow the Fibonacci Sequence, discovered by Leonardo Fibonacci.

So the next time you see numbers, remember—you are looking at the hidden language of the universe.

Jayavardhan Singh Rajawat

Where Curiosity Meets Knowledge!

1. Your brain rewires itself when you learn something new.

- This ability is called neuroplasticity – the brain changes its structure based on experience.

2. Energy is never created or destroyed.

- This is the Law of Conservation of Energy, one of the most important principles in science.

3. Octopus has three hearts.

- Two pump blood to the gills, and one pumps it to the rest of the body.

4. Ants do not sleep like humans.

- They also do not have lungs—they breathe through tiny holes in their bodies.

5. Trees can “talk.”

- They send chemical signals through the air and underground roots to warn other trees about danger.

6. Babies have more bones than adults.

- Babies have about 300 bones, while adults have 206 because many bones fuse together as we grow.

Famous Places of the World and Their Unique Identity

These famous cities show how geography, culture, and history give every place a special identity. Learning about such places helps students understand the beauty and diversity of our global world.

- Udaipur is known as the City of Lakes because of its beautiful lakes like Pichola and Fateh Sagar that enhance its royal charm.
- Jaipur is called the Pink City as most of its historic buildings were painted pink to welcome royal guests in the past.
- Paris is famously known as the City of Light due to its rich culture, art, and early adoption of street lighting.
- Venice is called the City of Canals because transportation in the city mainly happens through its network of beautiful waterways.
- Mumbai is known as the City of Dreams as it attracts people from all over India to achieve their ambitions.
- Rome is called the Eternal City because of its long and powerful history that continues to influence the modern world.
- New York City is popularly called The Big Apple and is known for its towering skyscrapers, global culture, and busy lifestyle.
- Istanbul is known as the City on Two Continents because it lies between both Europe and Asia.
- Agra is famous as the City of the Taj because it is home to the magnificent Taj Mahal.
- Kyoto is known as the City of Temples due to its hundreds of historic temples and cultural traditions.

Fascinating Facts from Our Everyday Life

Everyday life is full of surprising facts and wonderful discoveries. When we stay curious and observe the world around us, even the smallest things can teach us something amazing. So keep learning, keep exploring, and make every day exciting!

- Your brain is more active while you are sleeping than while watching television, which shows how important proper rest is for our body.
- Laughing for 10–15 minutes a day can burn a few calories and also improve your mood instantly.
- The human body has enough iron in it to make a small nail, showing how amazingly our body is designed.
- Your heart beats about 100,000 times every day, working non-stop to keep you alive and healthy.
- Reading just 20 minutes a day can expose you to nearly 1.8 million words in a year.
- A single tree can produce enough oxygen for several people in a day, reminding us why trees are so valuable.
- The average person spends about one-third of their life sleeping, which shows how important rest is for growth and health.

Think Before You Click

In the digital world, safety is essential to protect our personal information such as passwords, bank details, and online messages. Every time we use the internet, data is shared, stored, and processed. Data protection is the scientific method of keeping this information safe from cyber threats.

The main science behind data protection is encryption. Encryption converts readable data into a coded form so that only authorized users can access it. Another important technique is authentication, which confirms a user's identity using passwords, OTPs, or biometric features such as fingerprints and facial recognition.

Firewalls and antivirus software act as digital security guards by preventing unauthorized access and detecting harmful programs. Regular software updates also help fix security weaknesses and improve protection against cybercrime.

Cyber safety is a shared responsibility. By using strong passwords, avoiding suspicious links, and staying aware online, we can protect our data and become responsible digital citizens. Cyber safety education in schools and at home helps students understand risks, report cyberbullying, and think before sharing anything on the internet.

When young people learn these habits early, they stay safe today and grow into confident and responsible users of technology in the future.

Digital India: Technology Transforming Lives

“Technology connecting millions, empowering billions.”

India has rapidly transformed into a digital society. With initiatives like Digital India, millions of people now use digital services for banking, education, shopping, and communication.

Technology is also improving education through online learning, virtual classrooms, and digital libraries.

The digital revolution is making services faster, easier, and accessible for everyone.

India's digital transformation shows how technology can improve everyday life. Programs like Digital India are helping bring internet access, digital services, and new opportunities to millions of people across cities and villages.

Innovations such as the Unified Payments Interface have made financial transactions faster, safer, and more convenient. Today, India is one of the global leaders in digital payments and financial technology.

For students, the digital age opens endless possibilities. Online learning platforms, digital libraries, and virtual classrooms allow young minds to learn beyond the limits of textbooks and classrooms.

The future will belong to those who can use technology creatively and responsibly. By learning digital skills today, students can become the innovators, entrepreneurs, and leaders who will shape tomorrow's world.

India's digital journey proves that when technology meets vision and determination, it can transform lives and build a brighter future for all.

India Rising – A Journey of Dreams, Determination and Discover

“The rise of India is the story of determination, innovation, and opportunity.”

In recent years, India has captured the world’s attention with its remarkable progress and growing influence in the global economy. In 2025, India achieved a historic milestone by becoming the fourth-largest economy in the world, surpassing Japan with a GDP of about \$4.18 trillion. Today, only United States, China, and Germany stand ahead of India in economic size.

This achievement is not just about numbers—it reflects the strength, creativity, and determination of millions of people. From farmers working in green fields to scientists developing new technologies, every citizen contributes to the nation’s journey of growth.

India’s progress is powered by rapid technological advancement, innovative startups, strong industries, and a thriving digital economy. Across the country, young entrepreneurs are launching new ideas, engineers are building smart solutions, and innovators are shaping the future. Because of this momentum, experts believe India could soon become the third-largest economy in the world. But the story of India’s rise is also the story of its youth. With one of the youngest populations in the world, the nation is filled with energy, creativity, and ambition. Schools and universities across the country are nurturing the next generation of scientists, entrepreneurs, artists, and leaders.

The students sitting in classrooms today will design tomorrow’s technologies, start new businesses, solve global challenges, and lead the country into a brighter future. Their curiosity, imagination, and dedication will decide how far the nation rises in the years to come.

India’s growth shows that the future of the global economy will not only be shaped by developed nations but also by rapidly developing countries full of talent and opportunity. With education, innovation, and determination, the possibilities are endless.

Inspiration for Young Minds:

The story of India’s rise has only just begun. The next chapter will be written by today’s students and tomorrow’s leaders. Dream big, learn continuously, and work with passion—because the future of India is being built by young minds like yours.

Green Energy: Powering a Sustainable Future

“Clean energy today for a greener tomorrow.”

As the world faces the challenge of climate change, many nations are turning toward cleaner and safer sources of energy. India is playing an important role in this global transformation by investing in renewable energy such as solar, wind, and hydro power.

Across the country, large solar parks and wind farms are producing electricity without harming the environment. India is also promoting global cooperation through the International Solar Alliance, launched with support from France. This initiative encourages countries around the world to adopt solar energy and reduce pollution.

Clean energy is not only about producing electricity; it is about protecting the planet for future generations. Solar panels on rooftops, electric vehicles, and renewable energy projects are helping create a cleaner and healthier environment.

Young people also have an important role to play. Simple actions like saving electricity, planting trees, and spreading awareness can help protect our Earth.

Message:

The energy choices we make today will shape the world of tomorrow. By supporting green energy, we can build a future where progress and nature grow together in harmony.

GST 2.0 – India’s New Tax Reform

Caption: “Simpler Taxes, Stronger Economy.”

In 2025, India introduced GST 2.0, a major step toward making the country’s tax system simpler and more efficient. The reform aimed to reduce the complexity of multiple tax slabs and move mainly toward two major rates – 5% and 18%. This change helps businesses understand taxes more easily and reduces confusion in the system.

For common citizens, GST 2.0 brings relief as many daily-use products and essential medicines are expected to become more affordable. Small businesses and shopkeepers also benefit because the new structure makes tax filing simpler and faster. A transparent tax system not only supports economic growth but also builds trust between the government and citizens.

For students, GST 2.0 is an example of how economic reforms shape the progress of a nation. It reminds us that strong systems and smart policies can improve everyday life for millions of people.

Motivational Thought:

“A nation grows stronger when its systems become simpler and opportunities become greater.”

India's Giant Leap into Space

India's journey in space exploration is a powerful story of determination, innovation, and the courage to dream big. From humble beginnings with limited resources, the Indian Space Research Organisation (ISRO) has transformed the nation into a global space power. Today, India stands among the leading countries in space technology, inspiring millions of students like me to believe that no dream is too distant.

One of the most remarkable achievements in recent times is Chandrayaan-3, which made India the first country to successfully land near the Moon's south pole. This historic mission not only demonstrated India's scientific capability but also showcased its resilience after earlier challenges. It provided valuable insights into the lunar surface and opened new possibilities for future exploration.

Another milestone is the Aditya-L1 mission, India's first solar observatory, which studies the Sun and helps scientists understand space weather and its impact on Earth. Alongside this, the ambitious Gaganyaan mission aims to send Indian astronauts into space, marking a new era in human spaceflight for the country.

India's progress is also driven by innovation and collaboration. The rise of private space startups and advancements in cost-effective technology have strengthened India's position in the global space sector. Importantly, space technology in India is not limited to exploration—it plays a vital role in weather forecasting, disaster management, communication, navigation, agriculture, and education, directly benefiting millions of people across the country.

In addition, India has earned global recognition for launching satellites for several countries at a much lower cost, proving that excellence does not always require enormous resources. This unique strength has positioned India as a trusted partner in international space missions.

As a student, I find India's space journey deeply motivating. It teaches us that success is not defined by resources, but by vision, hard work, and perseverance. Each mission reflects the spirit of never giving up and constantly striving for excellence. It also reminds us that science and innovation are powerful tools to bring positive change in society.

India's achievements in space remind us that the sky is not the limit—it is just the beginning. The future belongs to those who dare to dream, and India is reaching for the stars.

INDIA OF MY DREAMS

India I dream of is different from what I see today,
I see a hope that my dream will come true someday.
A place where women walk freely, without fear or pain,
No discrimination, no stereotypes, no hatred in their name.

Where laws are strong and justice is fair,
No cases left waiting, no religious fights in the air.
Ministers put the nation before power or personal gain,
Technology rises higher, but never gives another pain.

AI is useful but employment is necessary,
So every life feels safe, strong and steady.
The gap between rich and poor does not create fear,
I dream of an India where every voice is clear.

Families of soldiers feel the pain of empty chair at dinner,
Yet that pain makes them stronger, not weaker but winner.
They turn their loved ones into real heroes of the land,
With pride in their hearts and strength in their stand.

With hearts full of courage and hands ready to start,
We strive to achieve the goal of a developed nation.
Dream "Viksit Bharat", by reaching it till 2047,
I reaffirm proudly to contribute in making India a heaven !!!

The Youth of India: Builders of Tomorrow

Caption: “Young minds today, world leaders tomorrow.”

India has one of the youngest populations in the world. Millions of students are preparing to become scientists, engineers, doctors, teachers, and innovators.

Education, creativity, and curiosity are the keys that will shape India’s future. With access to technology, knowledge, and global opportunities, today’s students have the power to transform society.

Young people are not just the leaders of tomorrow—they are the change-makers of today.

The strength of a nation lies in the energy, creativity, and determination of its youth. Young people bring fresh ideas, new perspectives, and the courage to challenge problems and create solutions.

India’s history has shown how the power of youth can change the course of a nation. Leaders like Swami Vivekananda believed that the youth are the true builders of a country’s future. His inspiring message encouraged young minds to believe in their abilities and work for the progress of society.

Students today have access to knowledge, technology, and opportunities that previous generations could only imagine. By using these tools wisely and working with dedication, they can contribute to innovation, social development, and global progress.

The dreams, ideas, and actions of today’s youth will shape the India of tomorrow. With determination, integrity, and a spirit of service, young minds can build a nation that is stronger, smarter, and more compassionate.

After all, the future of India is not something that will simply arrive—it is something that the youth will create.

AI Summit 2026 – India Leading the Future of Technology

Caption: “Artificial Intelligence for Humanity.”

India proudly hosted an important AI Summit in 2026, bringing together global leaders, scientists, innovators, and policymakers to discuss the future of Artificial Intelligence (AI). The summit focused on how AI can be used responsibly to improve education, healthcare, agriculture, and environmental protection. Experts from different countries shared ideas on creating ethical, safe, and human-centered technology.

India’s leadership in hosting this summit highlights its growing role in shaping the digital future of the world. It also shows the country’s commitment to using technology for the benefit of society. For students, this event is a powerful reminder that the future will be driven by knowledge, innovation, and creativity.

Young minds today will become the scientists, engineers, and leaders of tomorrow who will design technologies that make the world smarter and better.

Motivational Thought:

“The future belongs to those who imagine, innovate, and use technology to serve humanity.”

Beyond the Blue Sky: Exploring Our Solar System

Whenever I look up at the night sky, I am reminded of how small we are in comparison to the vast universe. Yet, within this endless expanse lies our home—the Solar System—a fascinating family of celestial bodies bound together by gravity and mystery.

At the center of our Solar System is the Sun, a massive ball of hot gases that provides light and energy to all the planets. Its gravitational force holds everything together, from the smallest asteroid to the largest planet. Surrounding the Sun are eight planets—Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune—each unique in its own way. While Mercury is the closest and experiences extreme temperatures, Neptune, the farthest, is known for its icy winds and deep blue color. Earth, our home, is the only known planet that supports life, thanks to its perfect distance from the Sun, presence of water, and protective atmosphere. Mars, often called the “Red Planet,” has been a subject of great interest for scientists exploring the possibility of life beyond Earth. Jupiter, the largest planet, is so massive that it could fit more than 1,300 Earths inside it, while Saturn is famous for its beautiful rings made of ice and rock particles.

Apart from planets, the Solar System also includes moons, asteroids, comets, and dwarf planets like Pluto. These celestial bodies add to the beauty and complexity of our cosmic neighborhood. The asteroid belt lies between Mars and Jupiter, while comets travel long distances, leaving glowing tails as they approach the Sun.

What makes the Solar System even more exciting is the continuous exploration by scientists. Space missions have helped us discover new facts, from water traces on Mars to mysterious storms on Jupiter. These discoveries remind us that there is still so much to learn and explore.

For students like us, the Solar System is not just a topic in textbooks—it is a source of curiosity and inspiration. It teaches us to think beyond boundaries, to question the unknown, and to dream big. Just as planets revolve around the Sun with perfect balance, we too must stay focused and move steadily towards our goals.

The universe is vast, and our Solar System is just the beginning. Who knows—one day, one of us might contribute to exploring new worlds or uncovering the secrets of space. Until then, let us keep looking up, because sometimes, the answers we seek lie far beyond the sky.

The Power Within: Energy Never Truly Ends

Have you ever noticed how nothing in this world truly disappears? The sunlight that warms us, the food we eat, and even our thoughts and actions—all are forms of energy, constantly changing from one form to another. Science tells us that energy can neither be created nor destroyed; it only transforms. But beyond physics, this idea holds a powerful message for our lives as well.

Every effort we make, every challenge we face, and every failure we experience is not wasted—it is simply being transformed into strength, learning, and growth. Just like a stretched rubber band stores energy and releases it when needed, our struggles often prepare us for greater achievements. What may seem like a setback today could be the very force that pushes us forward tomorrow.

In our daily lives, we witness this transformation everywhere. The food we eat becomes energy that helps us think, move, and achieve our goals. The sun's energy is converted into electricity, lighting up our homes. Even a small act of kindness creates positive energy that spreads and returns in unexpected ways. Nothing is ever lost—it simply changes its form and continues its journey.

As students, especially at a crucial stage like Grade 12, we often feel pressure, stress, and uncertainty about the future. But if we understand this simple truth—that no effort goes in vain—we begin to see things differently. Late-night studies, hard work, discipline, and even failures are all forms of energy being invested in our future. They will return to us as success, confidence, and experience at the right time.

This principle also teaches us responsibility. If energy is always transforming, then our actions matter. Positive thoughts and efforts can create a chain of constructive outcomes, while negativity can do the opposite. Therefore, it is important to channel our energy wisely—towards learning, creativity, kindness, and growth.

In the end, energy is not just a scientific concept; it is a reminder of life's continuity. Nothing we do is ever truly lost. Every moment, every effort, and every dream contributes to shaping who we become. So, let us use our energy with purpose, believing that even the smallest step today is building a brighter tomorrow.

After all, energy never ends—it only transforms, just like our potential.
